*Work:* +1-860-486-2590  
*Cell:* +1-412-443-6447  
*Web:* [bryanwweber.com](http://bryanwweber.com)

## RESEARCH INTERESTS

My research interests generally lie in developing tools to apply fundamental combustion insights to solve engineering problems. My recent work involves developing experimental methods to analyze intermediate species at practical combustion conditions. I am also interested in developing methods to analyze computational models, particularly kinetic models of combustion.

## EDUCATION

Ph.D., Mechanical Engineering, University of Connecticut, 2014  
M.S., Mechanical Engineering, University of Connecticut, 2010  
B.S.E., Aerospace Engineering, Case Western Reserve University, 2009

## PROFESSIONAL EXPERIENCE

Visiting Assistant Professor, University of Connecticut 2014–Present  
Conducting research on the combustion kinetics of alternative and traditional fuels. Teaching undergraduate courses in thermal-fluids engineering.

Graduate Research Assistant, University of Connecticut 2009–2014  
Undergraduate Research Assistant, Case Western Reserve University 2007–2009  
[Combustion Diagnostics Laboratory](#) — Director: C.-J. Sung  
Conducted experimental and computational studies of the ignition properties of several alternative fuels and foundational fuels, with focus on engine-relevant conditions. Designed a species sampling apparatus for time-resolved species measurements in the rapid compression machine, using gas chromatography/mass spectrometry to identify and quantify combustion intermediates. Analyzed kinetic models for combustion to determine the parameters controlling prediction of ignition delay and improve the ability of the models to predict combustion events.
